Follow Up

## Introduction

Given the importance of the educational field, the current project witch named " Follow Up System " aims to design especially for the primary schools. In addition "Follow Up", in addition facilitate the communication between parents and the school to help their children in improving their academic and behavioral level. The system providing easy communication between the guardian and the school by informing the parent of all matters concerning his child in school in terms of (child's homework, assessment of the child's academic and behavioral level, etc.) and can parents also book an appointment with the child's teacher and send complaints and suggestions to the school .

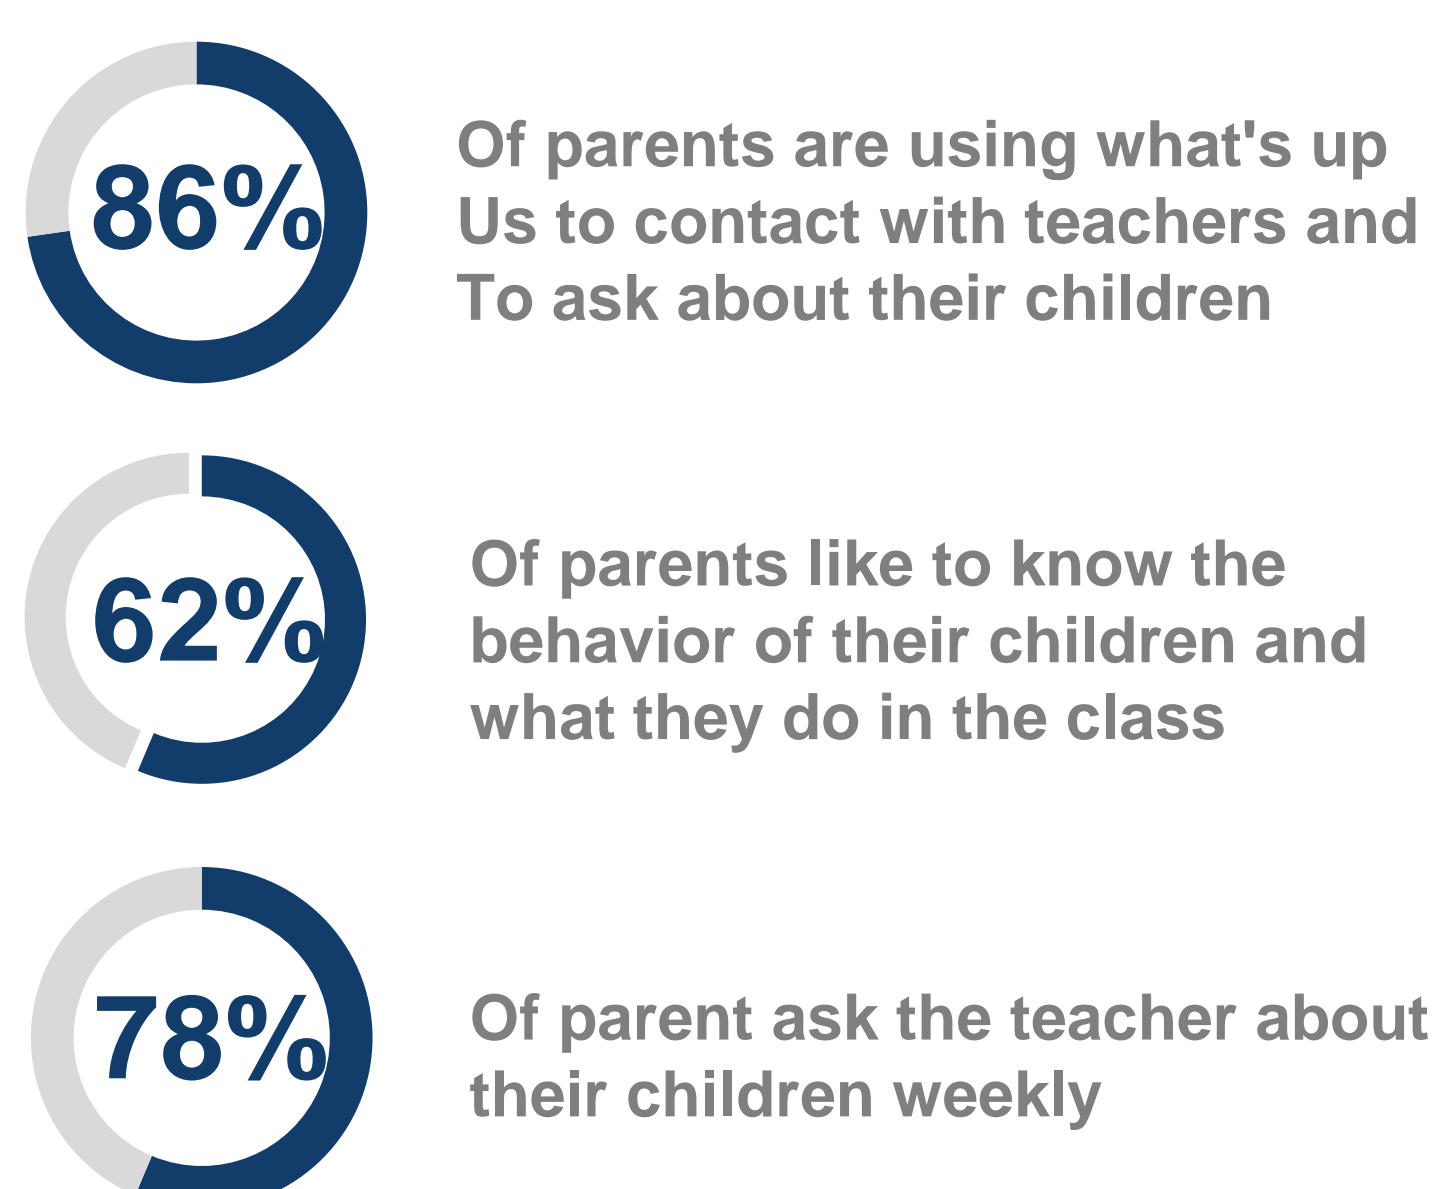

## Aims and Objectives

- Easy to learn.
- Easy to use.
- Avoiding the complexity in existing systems and other applications.
- Facilitating communication between parents and teachers.
- Enabling parents to use and cope with this kind of system and application.
- Avoiding the complexity in existing systems and other applications

## Motivation

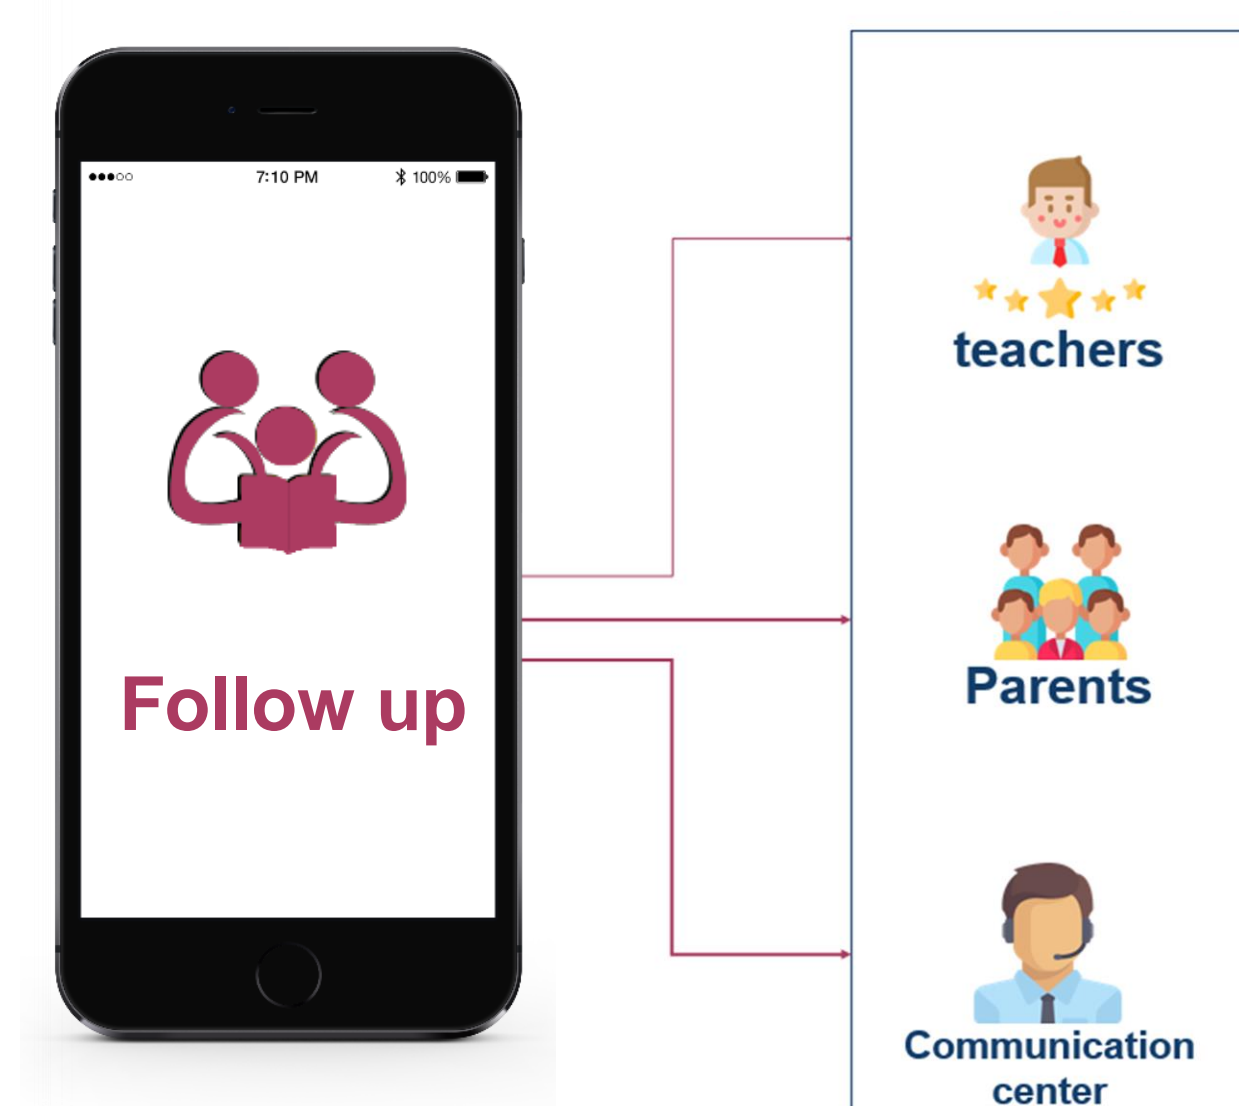

These are the results of a sample of pilot study on 51 parents who have student in elementary school in Mecca / Saudi Arabia .  
(private schools - government schools)  
Based on the results, it became clear that there is a need for a communication system that combines school and parents instead of social media applications to make communication more clear between the two parties, and this was one of the reasons that motivate us to implement this application.

## The results of pilot study:

## Users

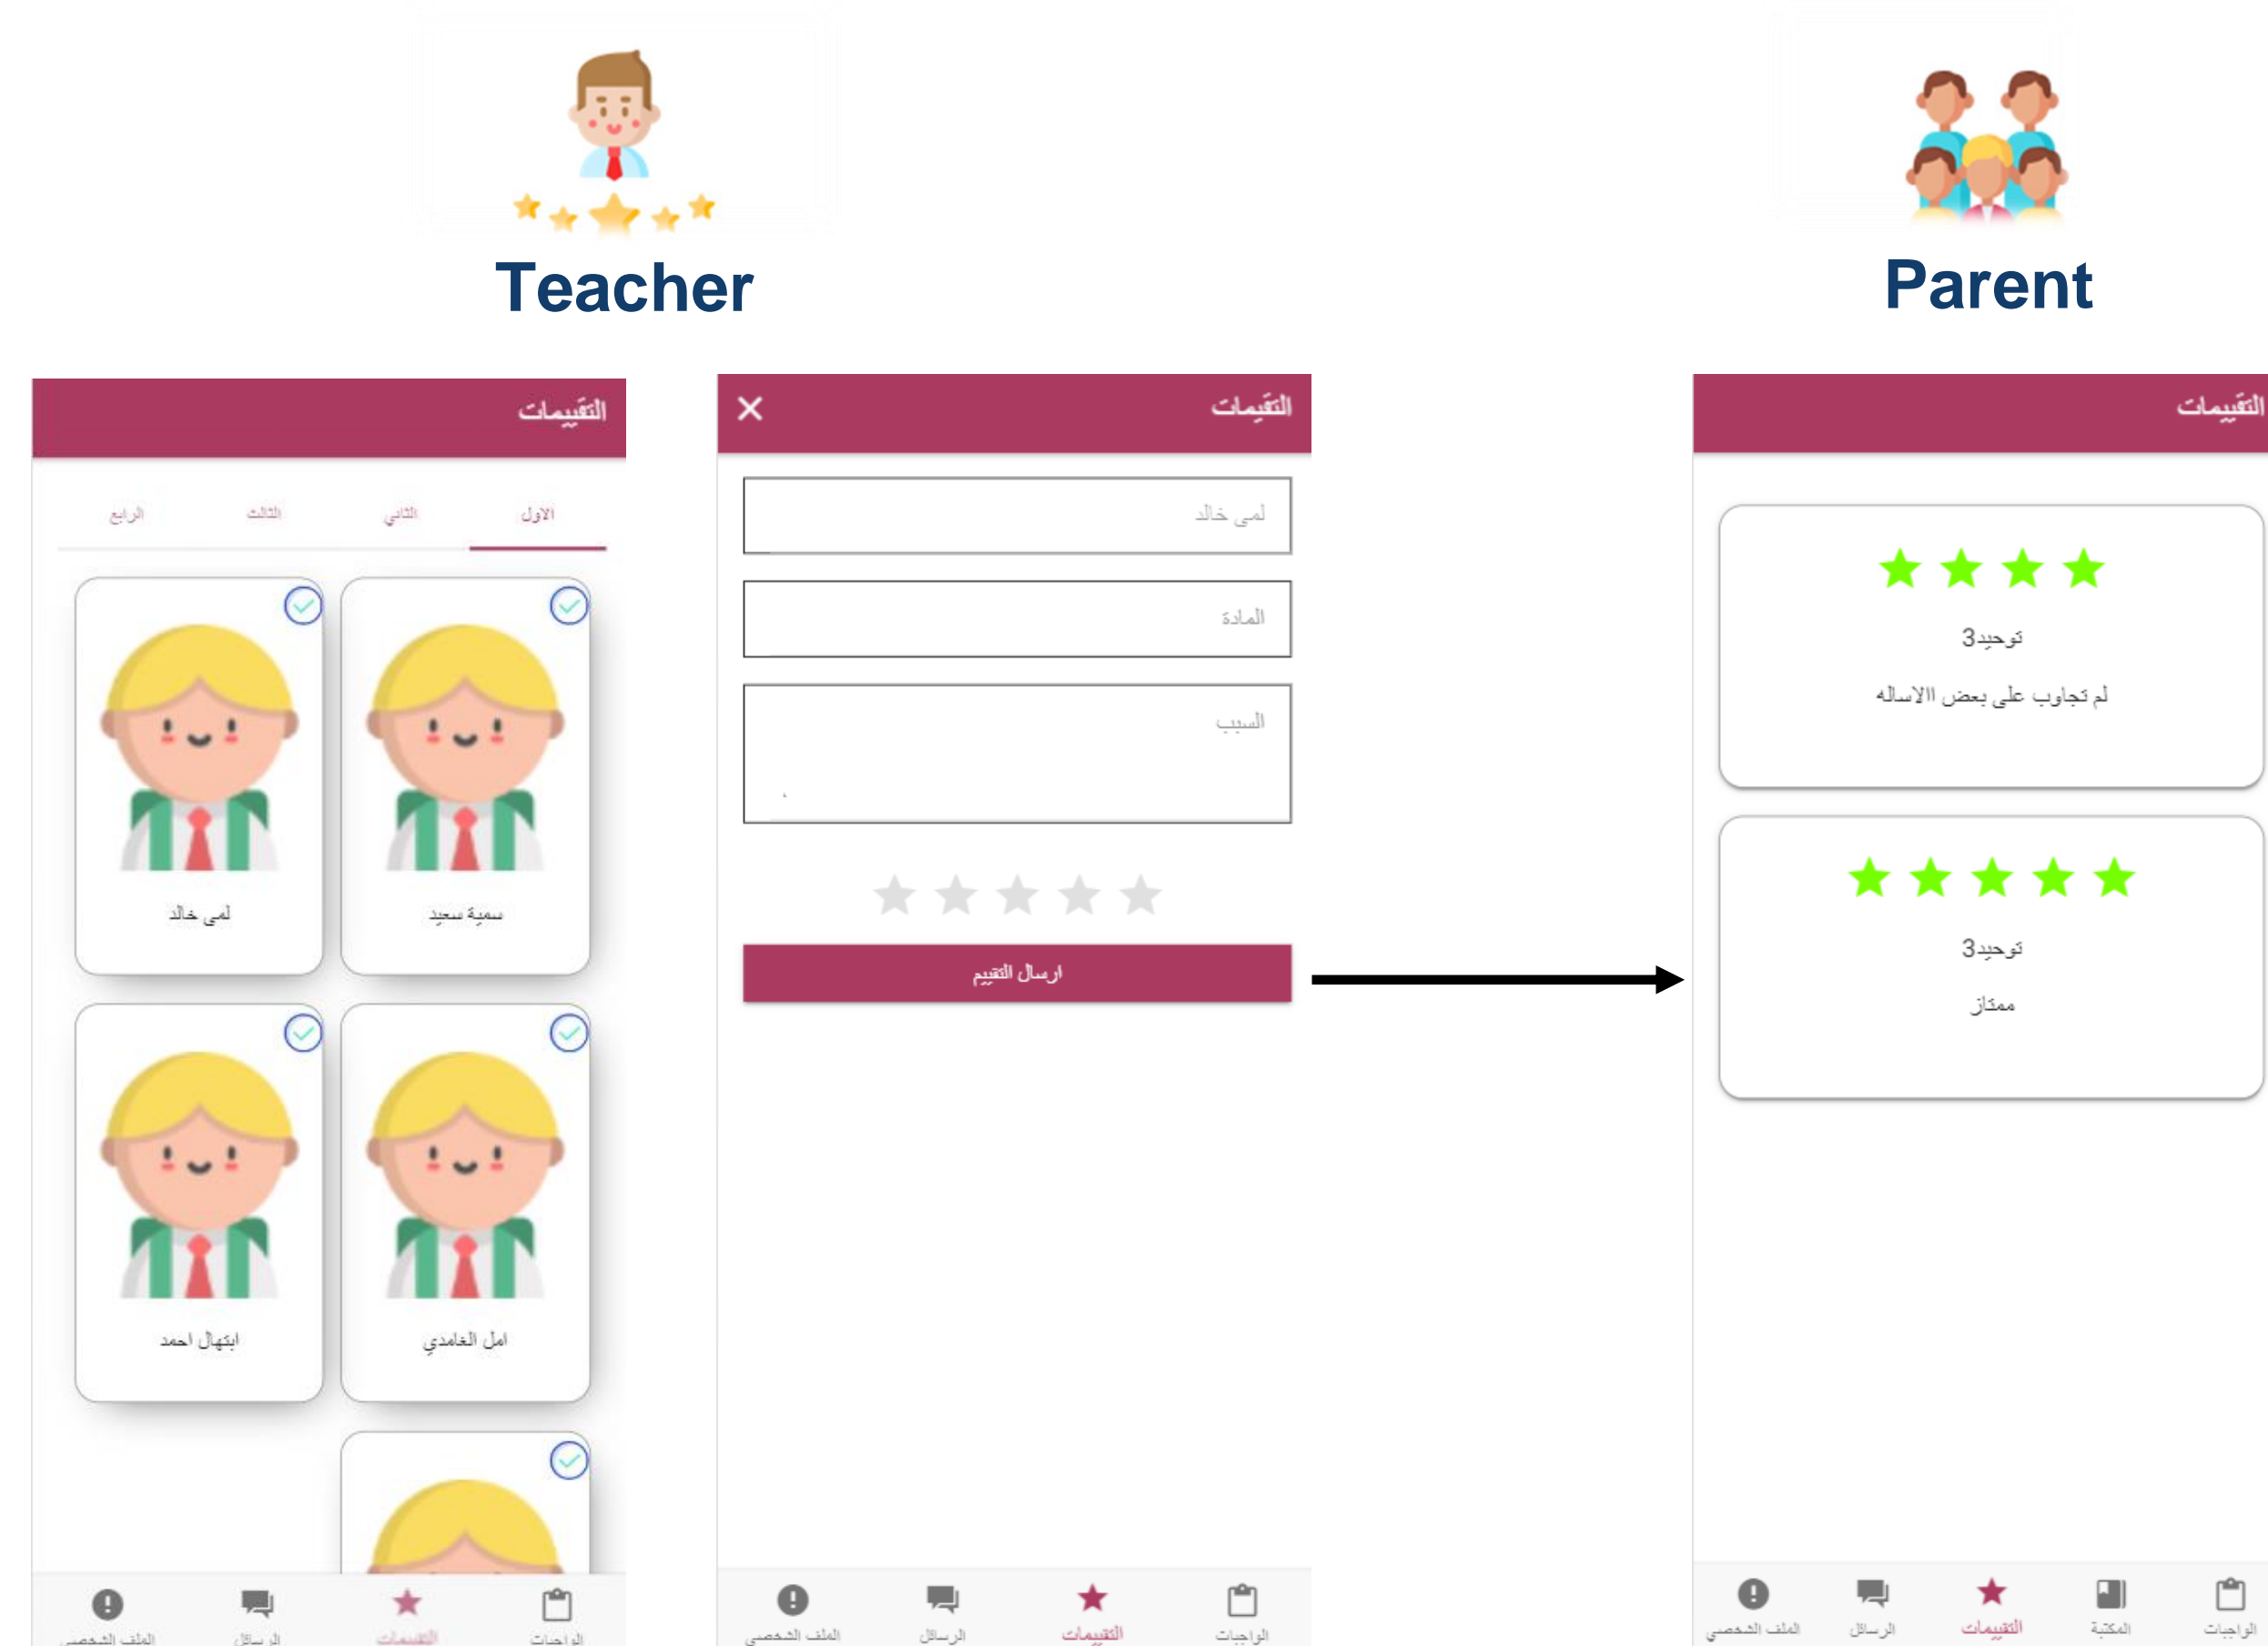

"Follow Up" application users who are student parents and teachers finally communication center which is part of school management.

## Results

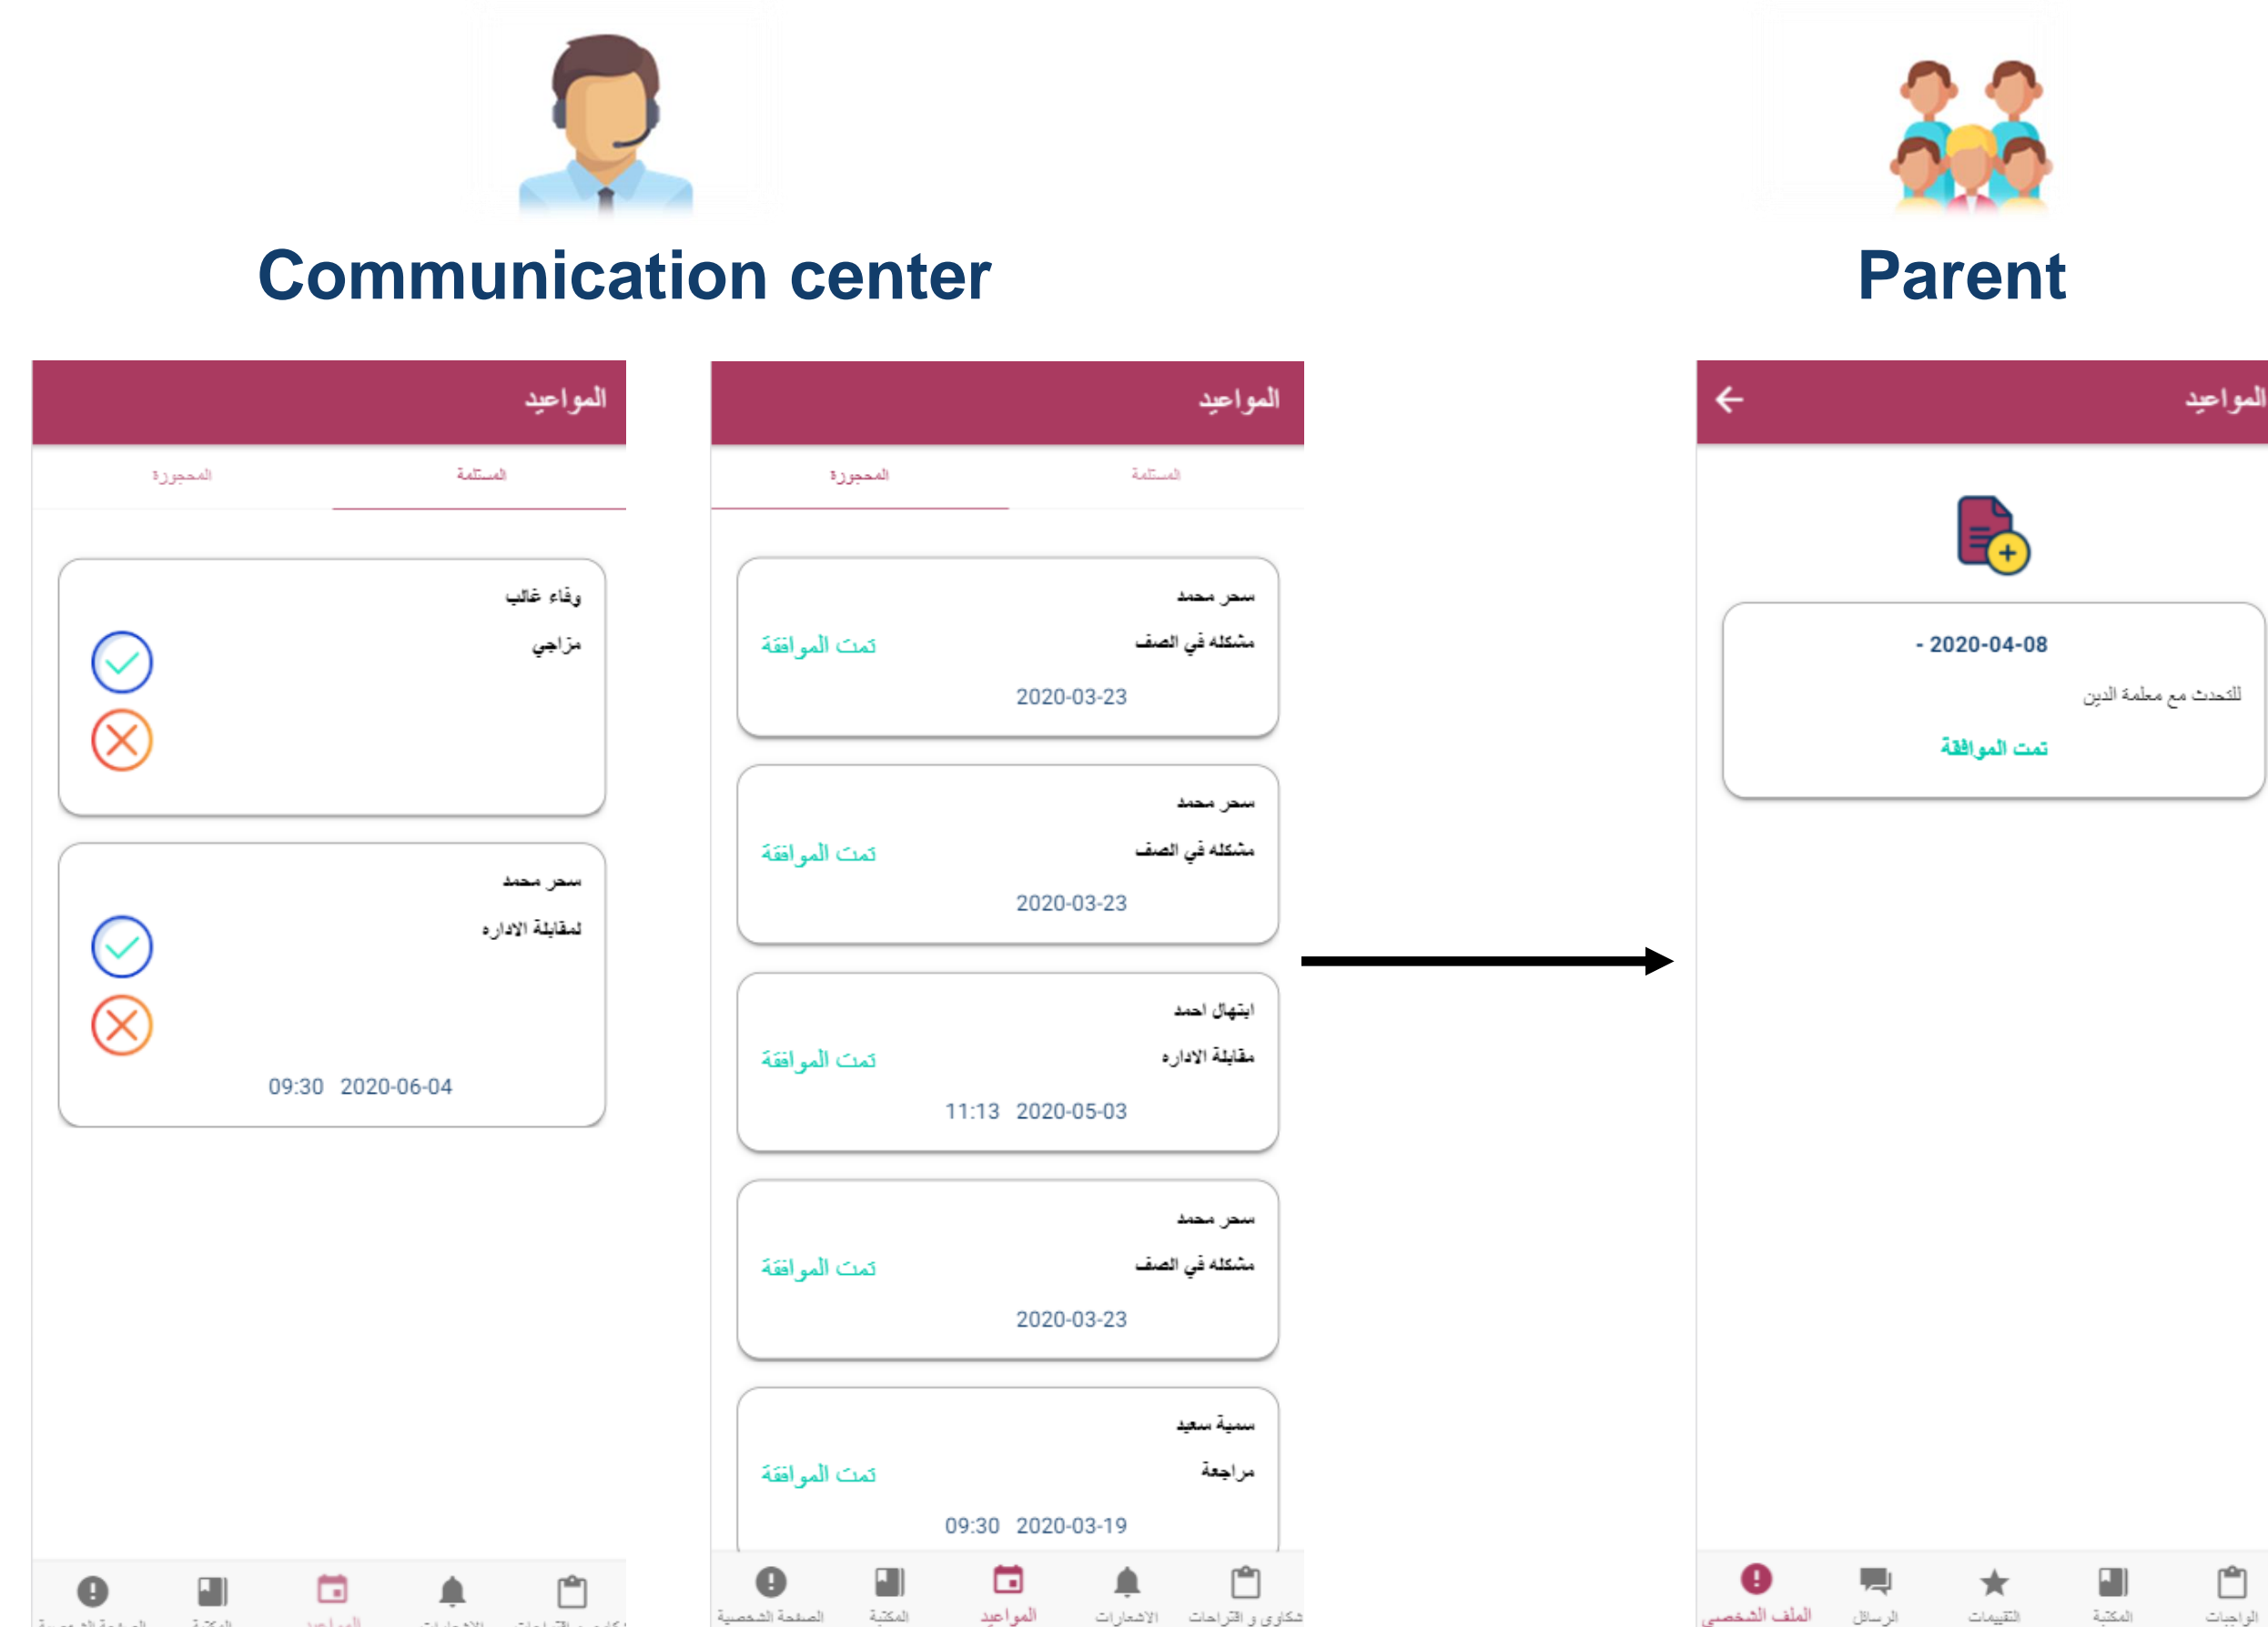

### Behavior Evaluation :

The teacher can rate the student by selecting the stars and add some note to the parent .

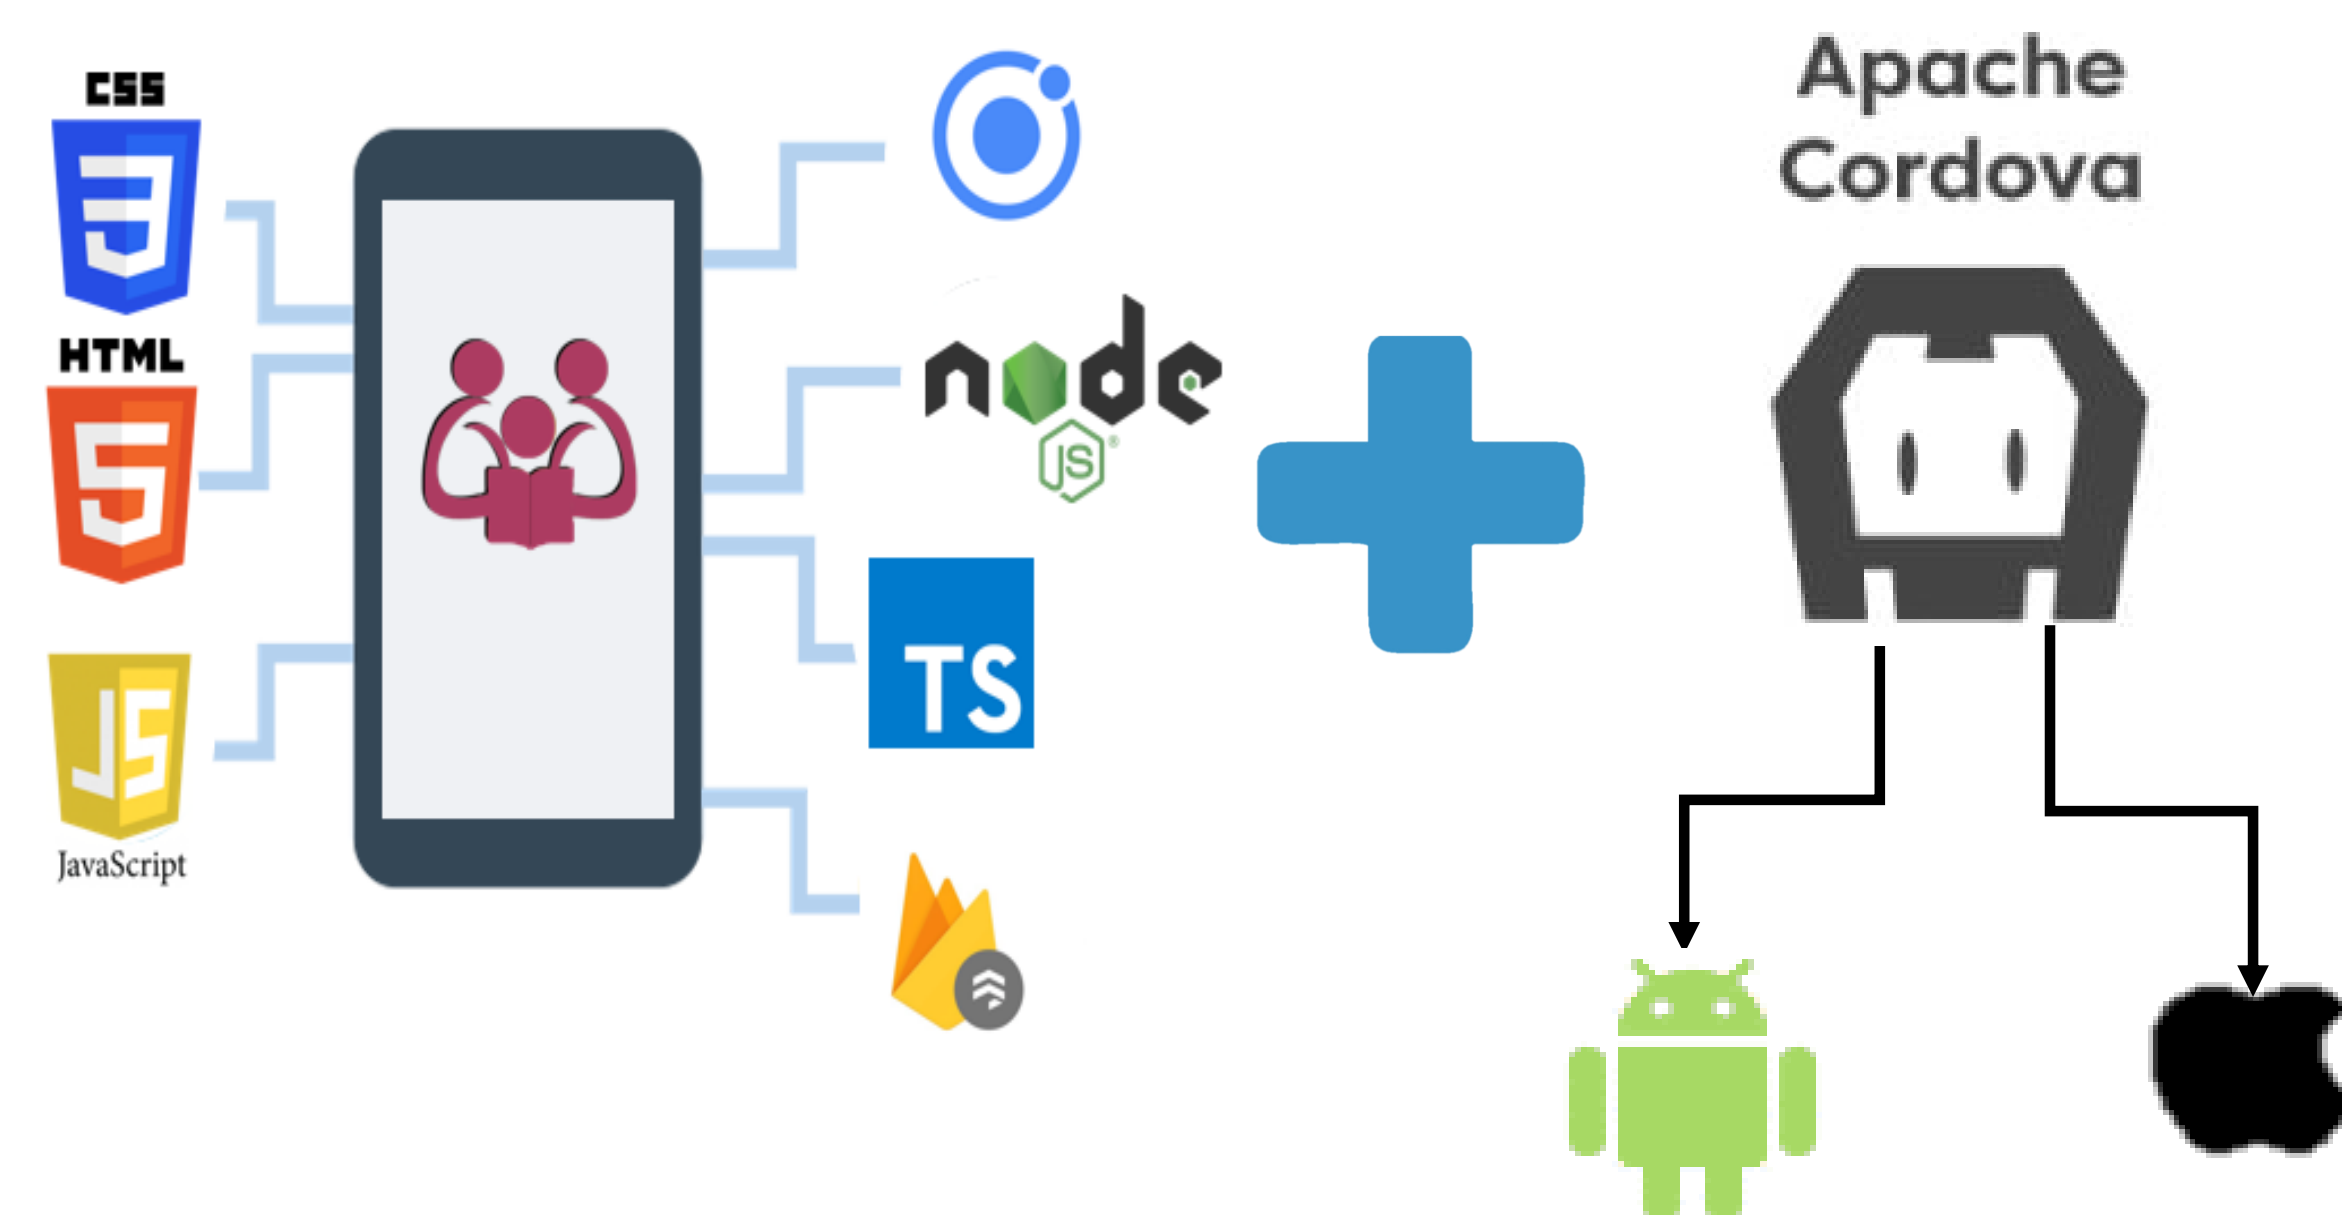

### Booking an Appointment :

The parent can book an appointment to visit the school and resave the respond from the school communication center by reject or accept.

## Tools

## Cross-platform

## Conclusion

- The “follow up” is a hybrid application designed in the concept of the cross-platform.
- The Cordova stitch the web app into the native app and interact with the native features of the device.
- The back-end of the app is the Firebase it provides plenty of services.
- The “follow up” allow the parents to communicate with the school and teachers .
- The parent can see the homework and the evaluated skills and behaviors from the teacher . also make a complain or subsection and book an appointment from the communication center to visit the school .
