Introduction

Buying online is difficult because people can not know the quality and physical properties of the products (such as their texture, actual size and color) or do not trust the marketing of companies. Our application will solve this problem by sharing people their experiences about products with transparency.

Goal

Our application aims to facilitate the selection of good products at the best prices and the latest offers that are published by our members from local stores or online. It also helps to take opinions and recommendations in order to provide a cooperative and fast shopping experience.

Application Area

The product categories in the application are electronics, home appliances and student tools. These sections are expandable when we develop our application.

Materials and Tools

Conclusion

Implement the SSC app to provide an interactive shopping experience by helping users to buy the best products and view the latest offers they have shared.

Feature

- The ability to share the image of any product within the application categories.
- The ability to share the direct geographical location of the product.
- The ability to see product reviews.
- The ability to see the best offers.
- The ability to keep favorite products.
