Introduction

Sometimes the customer may need a recommendation from someone to support the decision to buy a particular product, this can help speed up the decision-making and thus not hesitate. This results from the experience of the person recommending this product, living with it, and observing the strengths and weaknesses of this product. This is much better than just advertising from the product manufacturer, which mentions its many advantages, which often contradict reality. Therefore, we did an interactive medium in the form of an application that collects the largest number of reviews on different products. We customize the application to serve the evaluation of electronic products in general. This will help the buyer a lot in getting the best product through the experiences of many users who have tried this product to be purchased.

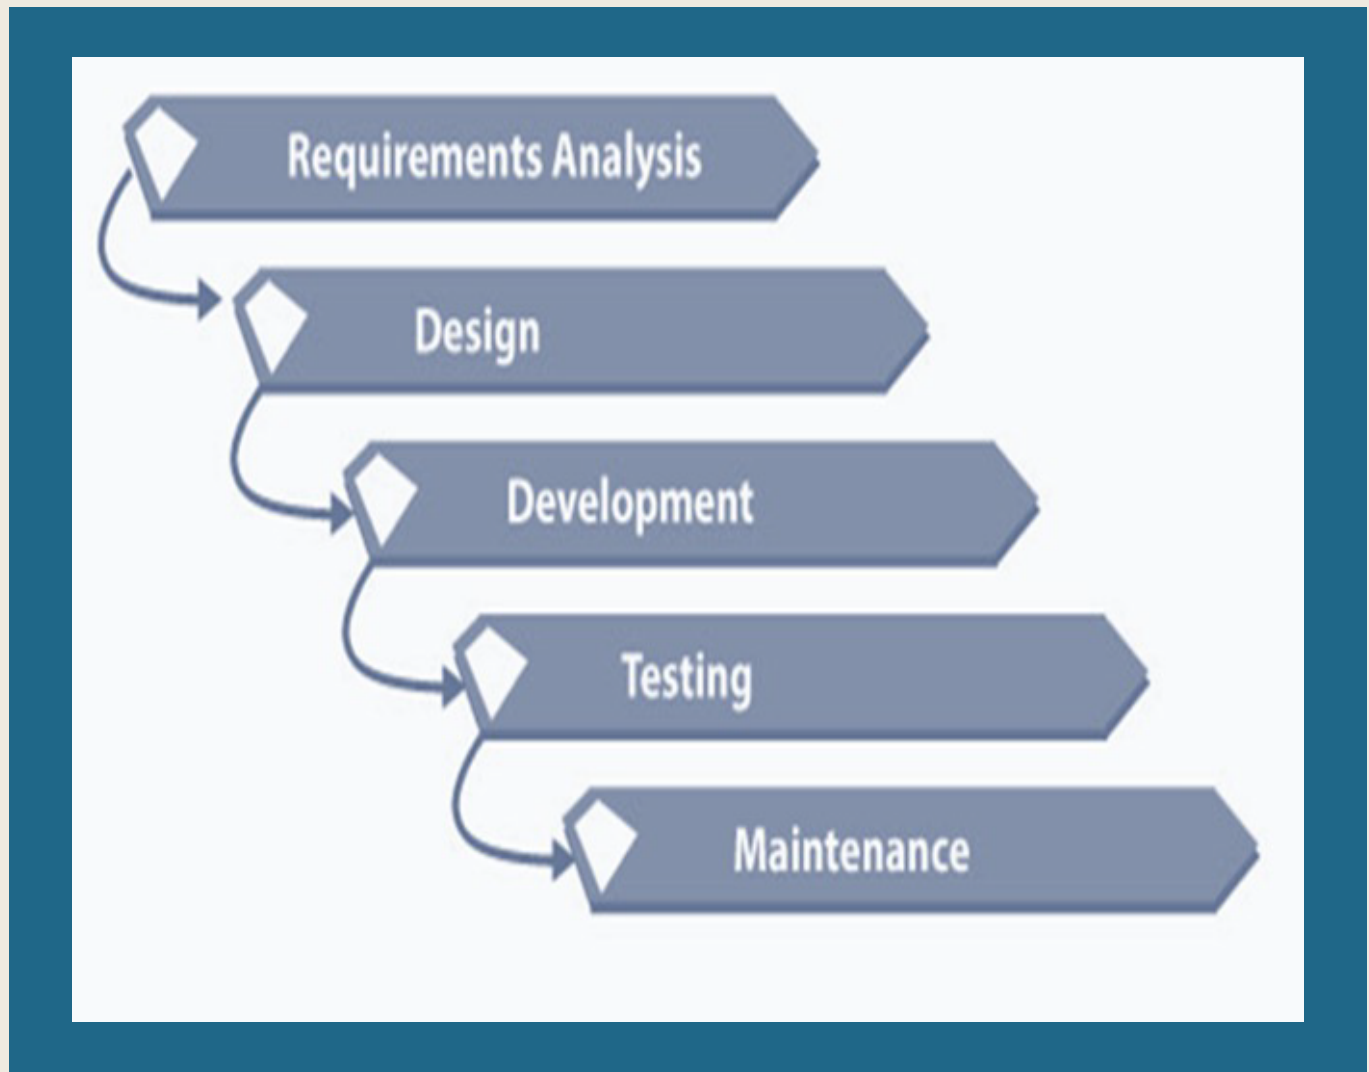

Purpose

customizing the application to serve the evaluation of electronic products in general. This will help the buyer a lot in getting the best product through the experiences of many users who have tried this product to be purchased

Objectives

- Save user’s time and provide comprehensive information about a device by simply searching for it.
- Provide sufficient motives confirming the idea of buying a device or not.
- Providing the opportunity to share user’s valuation about a specific device through ratings.

Methodology

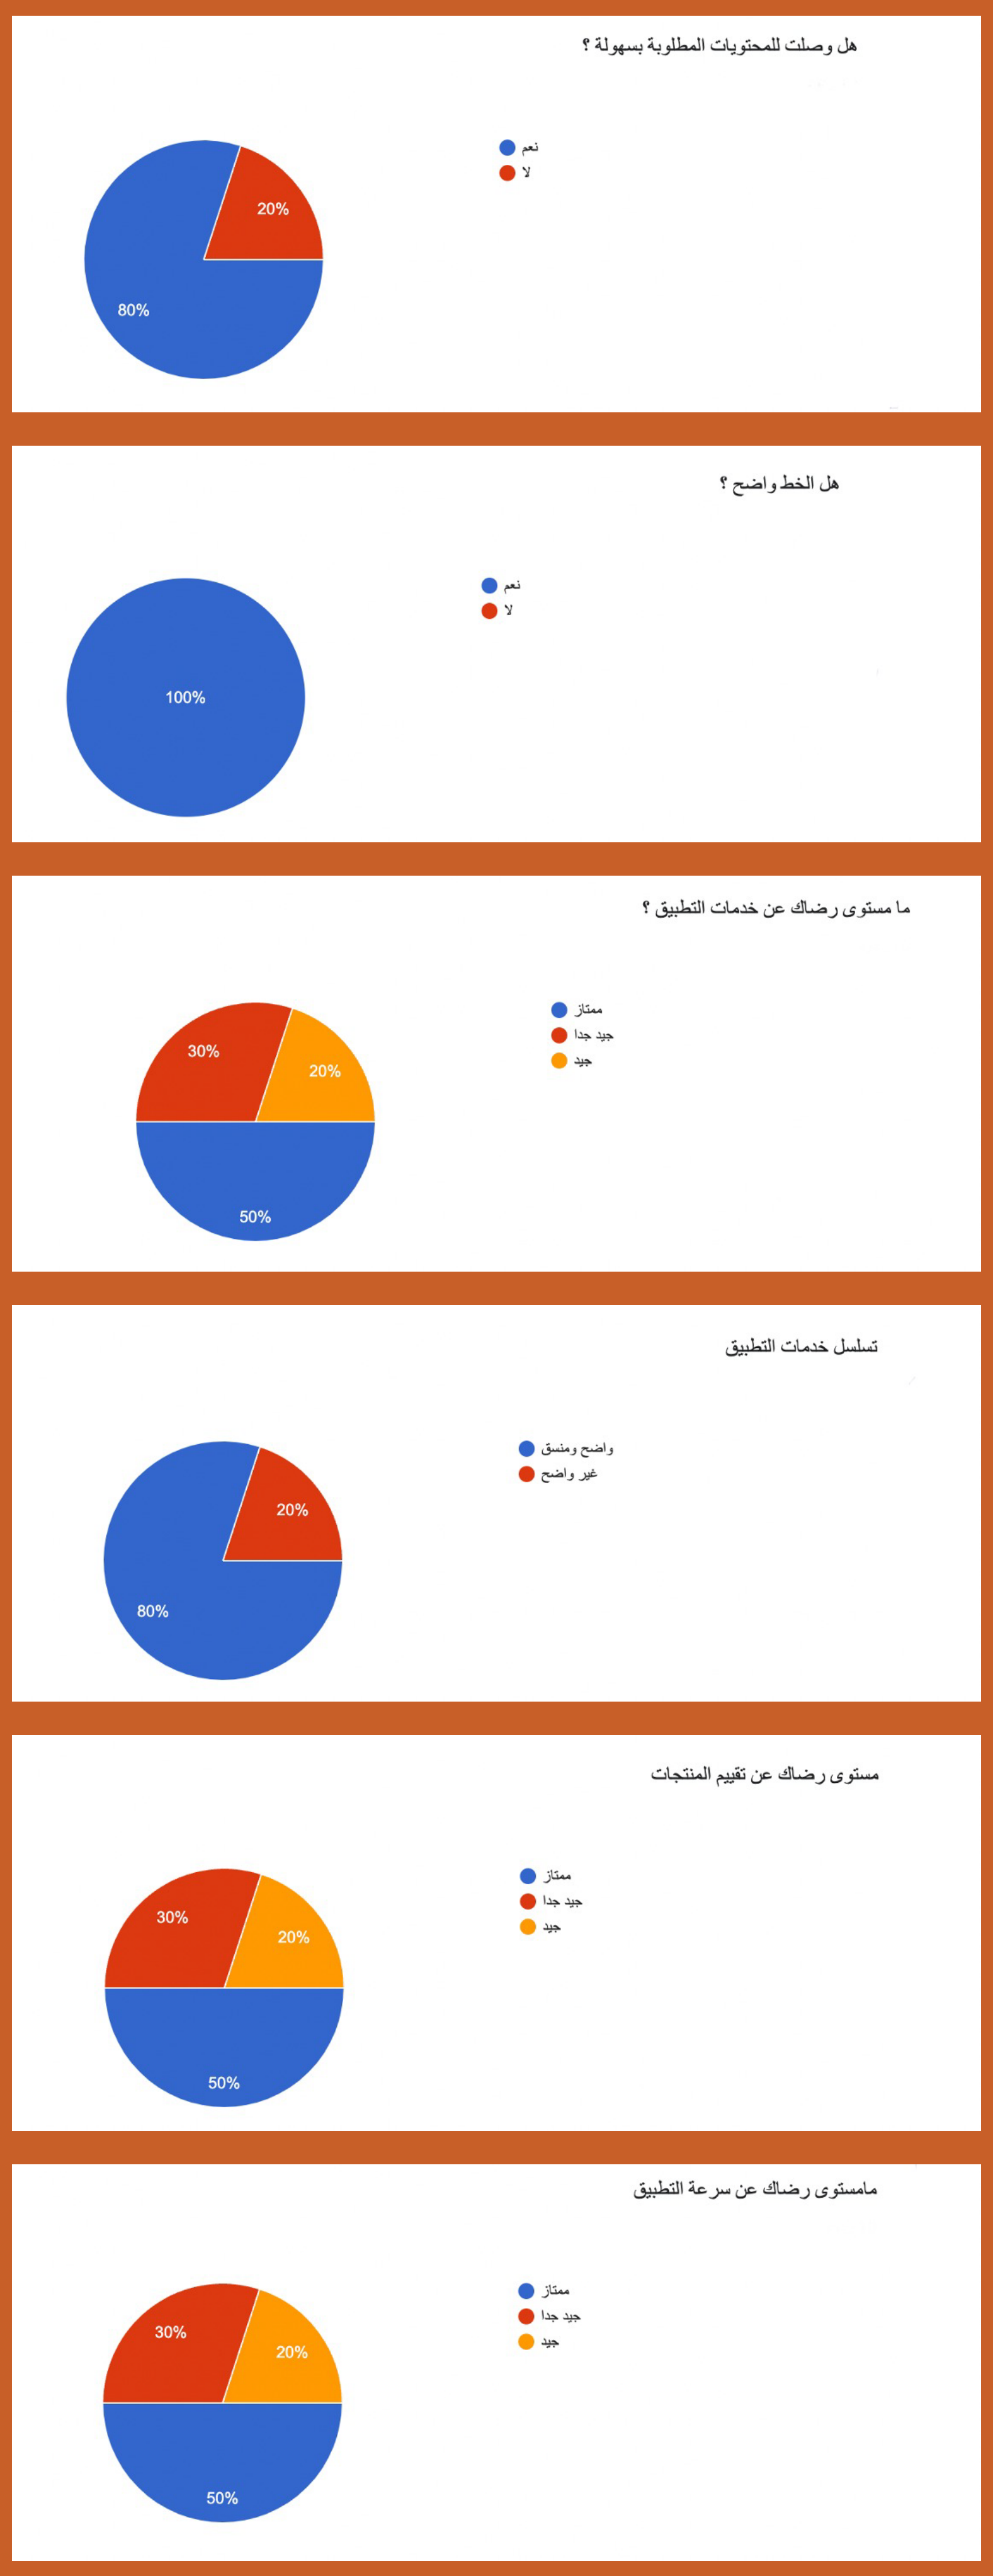

Materials and Tools

REUSLT

The interfaces of Application

CONCLOGIN

- Finding out the best devices that can be purchased according to the Valuation of other users
- Searching for the device whose rating you want to display, the device will be displayed with general information about it in addition to the device price
- A special icon has been set for comparison. If the user is confused about choosing two devices, he can put it in the comparison icon and the difference between the two devices will be shown to him to make it easier for him to choose
- Finally, we would like the system to be a reference, to allow users to get some information about a device according to ratings about this device.
