ABSTRACT

The rising demand and competition for computing professionals has seen a corresponding expansion in undergraduate computer science programs, so we offer the Eshraq website to meet the needs of both freelancers and stakeholders as much as possible.

INTRODUCTION

With the passage of time and the growing demand for computer professionals, little is known about the major specific competencies, knowledge, and skills of individuals.

Eshraq is a platform that links the freelancer into the real world, develop and increase their skills, and prepared for how difficult attaining the first job would be. Also, the platform may help graduated students who need help to start their own career.

The idea of "Eshraq" is to streamline the process of hiring or getting hired as a freelancer.

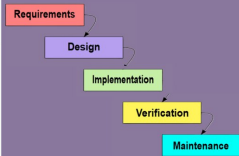

provides services to visitors based on their individual requirements. Finally, this software will be developed as web platform in order to reach a wide range of targeted users. It could be considered as "software as a service" (SAAS) which provides services to visitors based on their individual requirements.

At the end, The website that responds to different screens and devices is developed using PHP and the Laravel framework.
