Abstract

Most people are now using the internet In our present time.
greatly to help them in facilitating their lives, as everything happens with the click of a button
In the past, people were looking for things or places to entertain, so they had to go by themselves
And that was a waste of time, you might go to a place of entertainment and find that the shop is closed or they won't find the games they want to play.
Using the game halls booking application, you can search for the right place for people who want to play and have fun, as our application will save you a lot of time, and through our application you can book the games you want and choose the right time for you and
It will also put the entertainment venues in Makkah initially and we look forward to covering all gaming halls in the Kingdom of Saudi Arabia we will use Figma to design primitive interfaces and Flutter for application development

## Future Work

Build an Arabic interface.

Add more feature for the game hall business like menu bar, drinks.

Find more features for mostly popular games in the game halls.

CONCLUSION

Game hall booking mobile application is the first Saudi

application service serve the users want to use game halls in

Saudi Arabia in smart and professional way.

Tools

Aims and Objectives

Our application aims to many goals
Including knowing the special offers of the application only in cooperation with the owners of gaming halls in order to reach the best offers for customers.
It makes the owners of the halls take better care of their stores, because there will be an evaluation of the shop after the visit to the hall is completed
Knowing the level and quality of the shop through the application
One of the most important goals of the application is to satisfy the customer and make him happy and use the application constantly and invite those around him to use it.
