

Introduction

Because of the interest of people in Saudi Arabia towards handicrafts, we have provided an application in the Arabic language that provides course and workshop services for learners and those wishing to own a handicraft, while providing support to craftsmen and publishing their work. The application also displays shops selling handicraft supplies.

Objective

Providing educational opportunities such as courses and workshops.

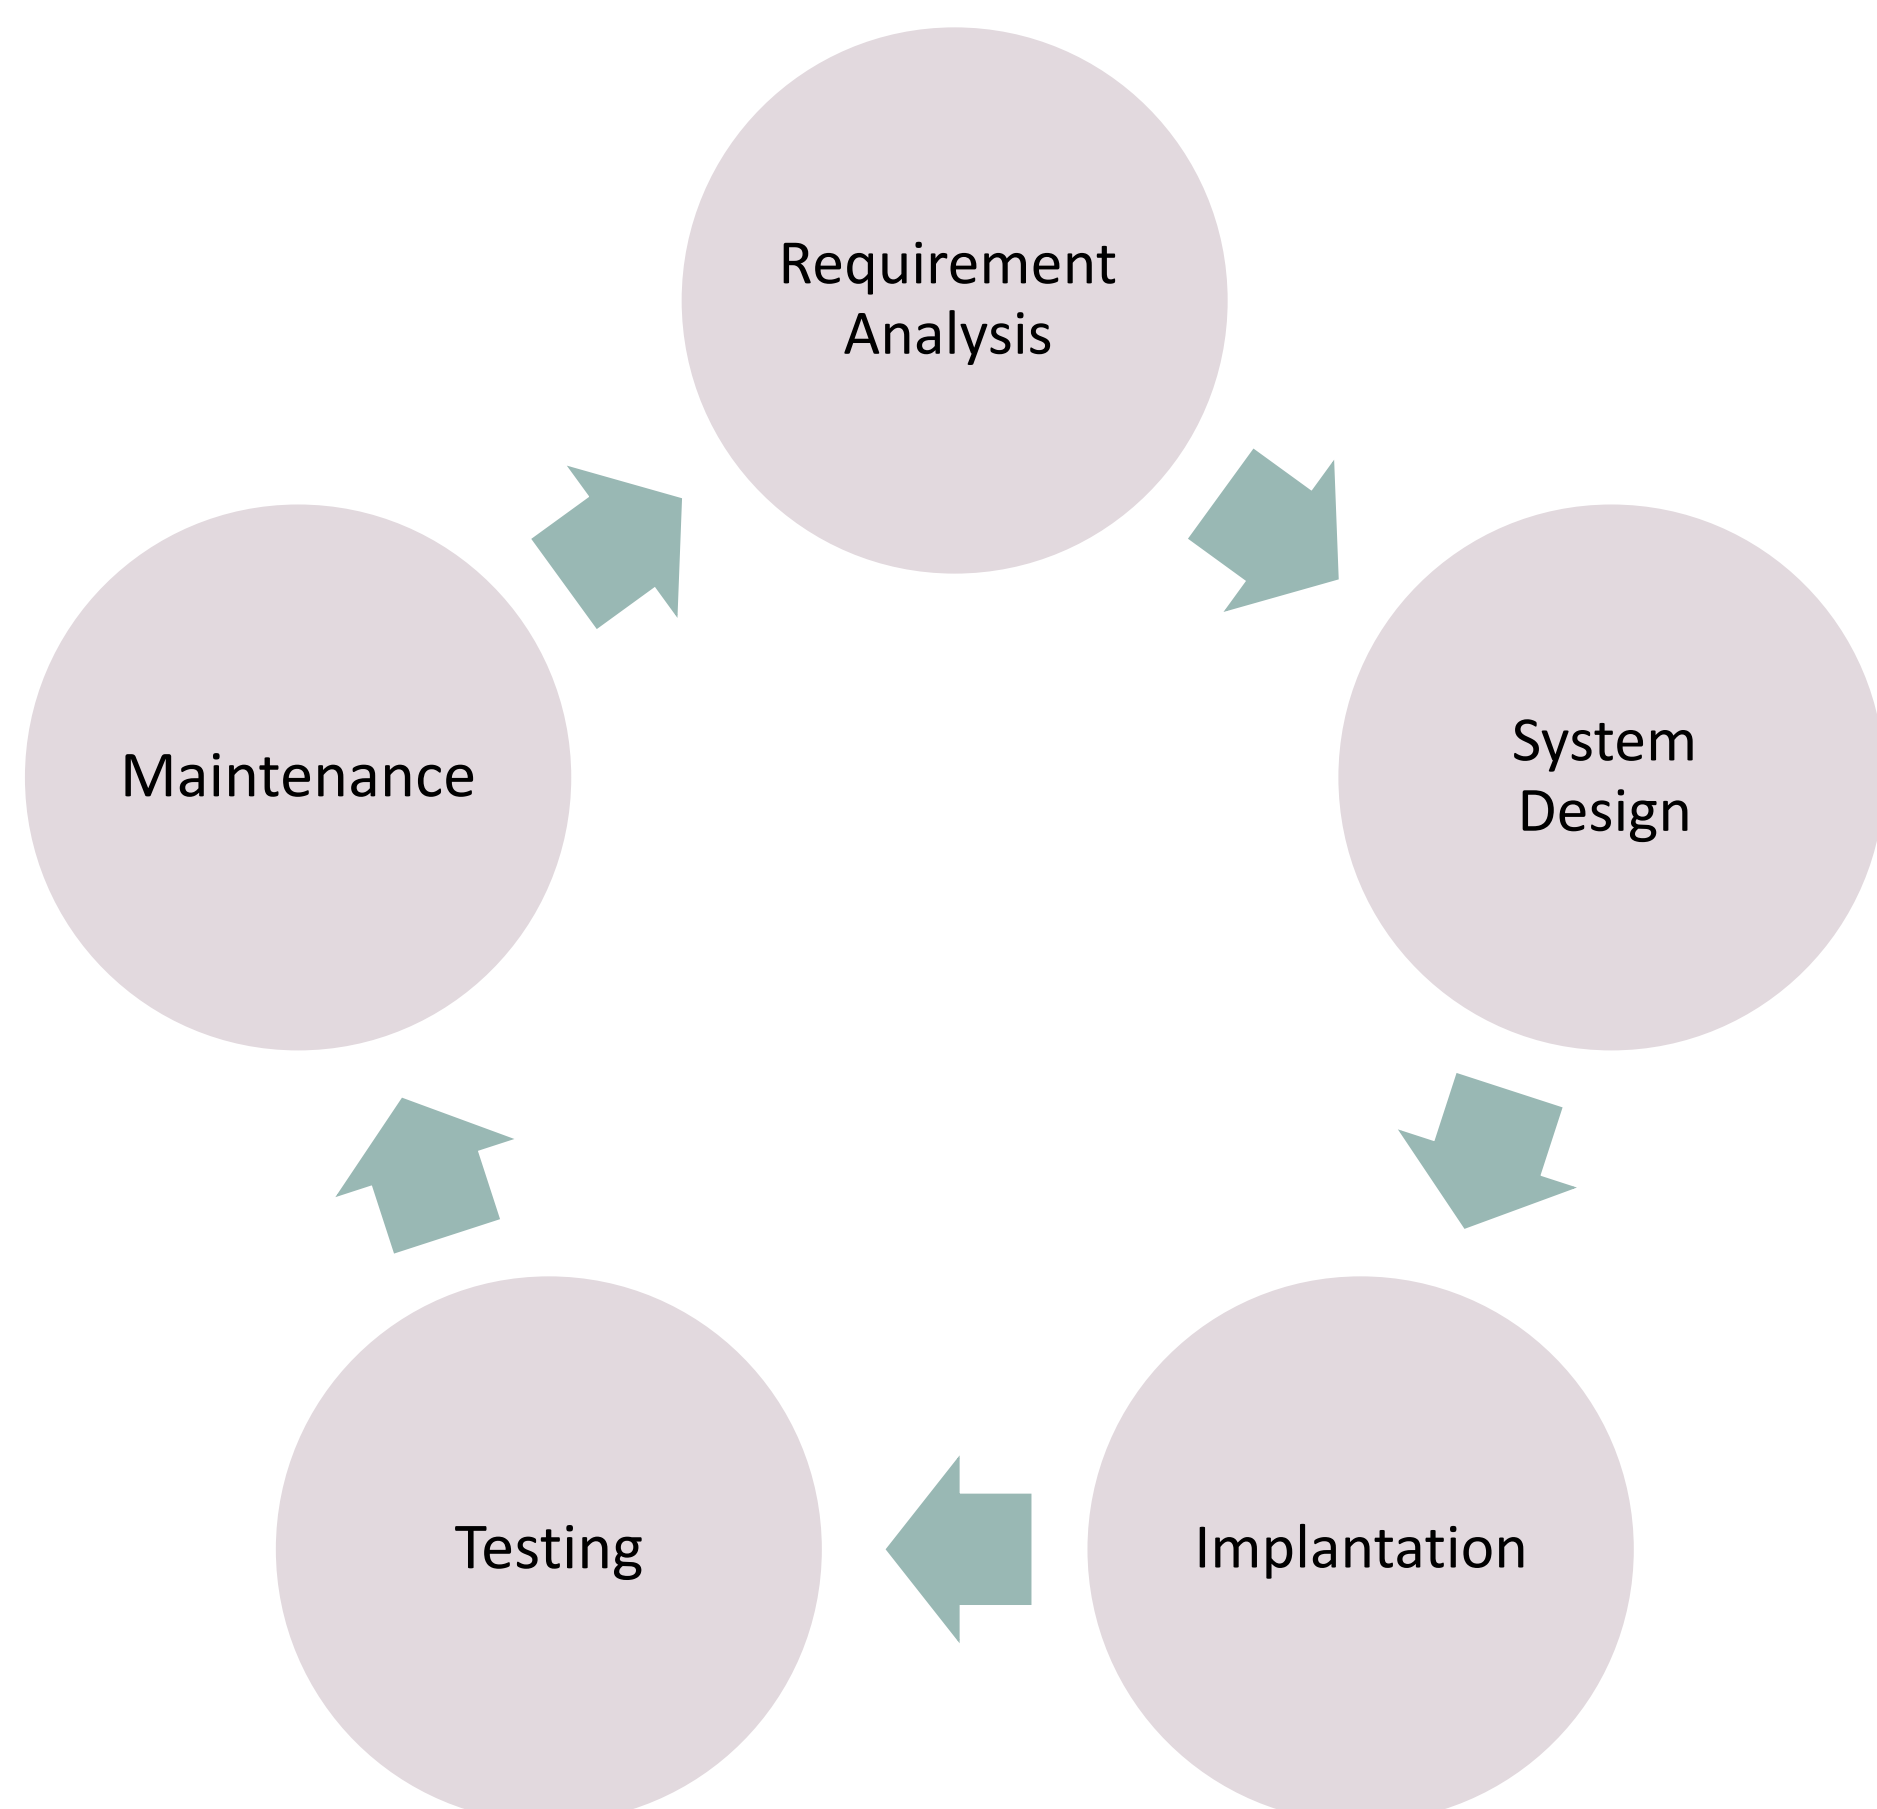

Facilitating the search process for the learner or craftsman for stores that provide handicraft supplies.

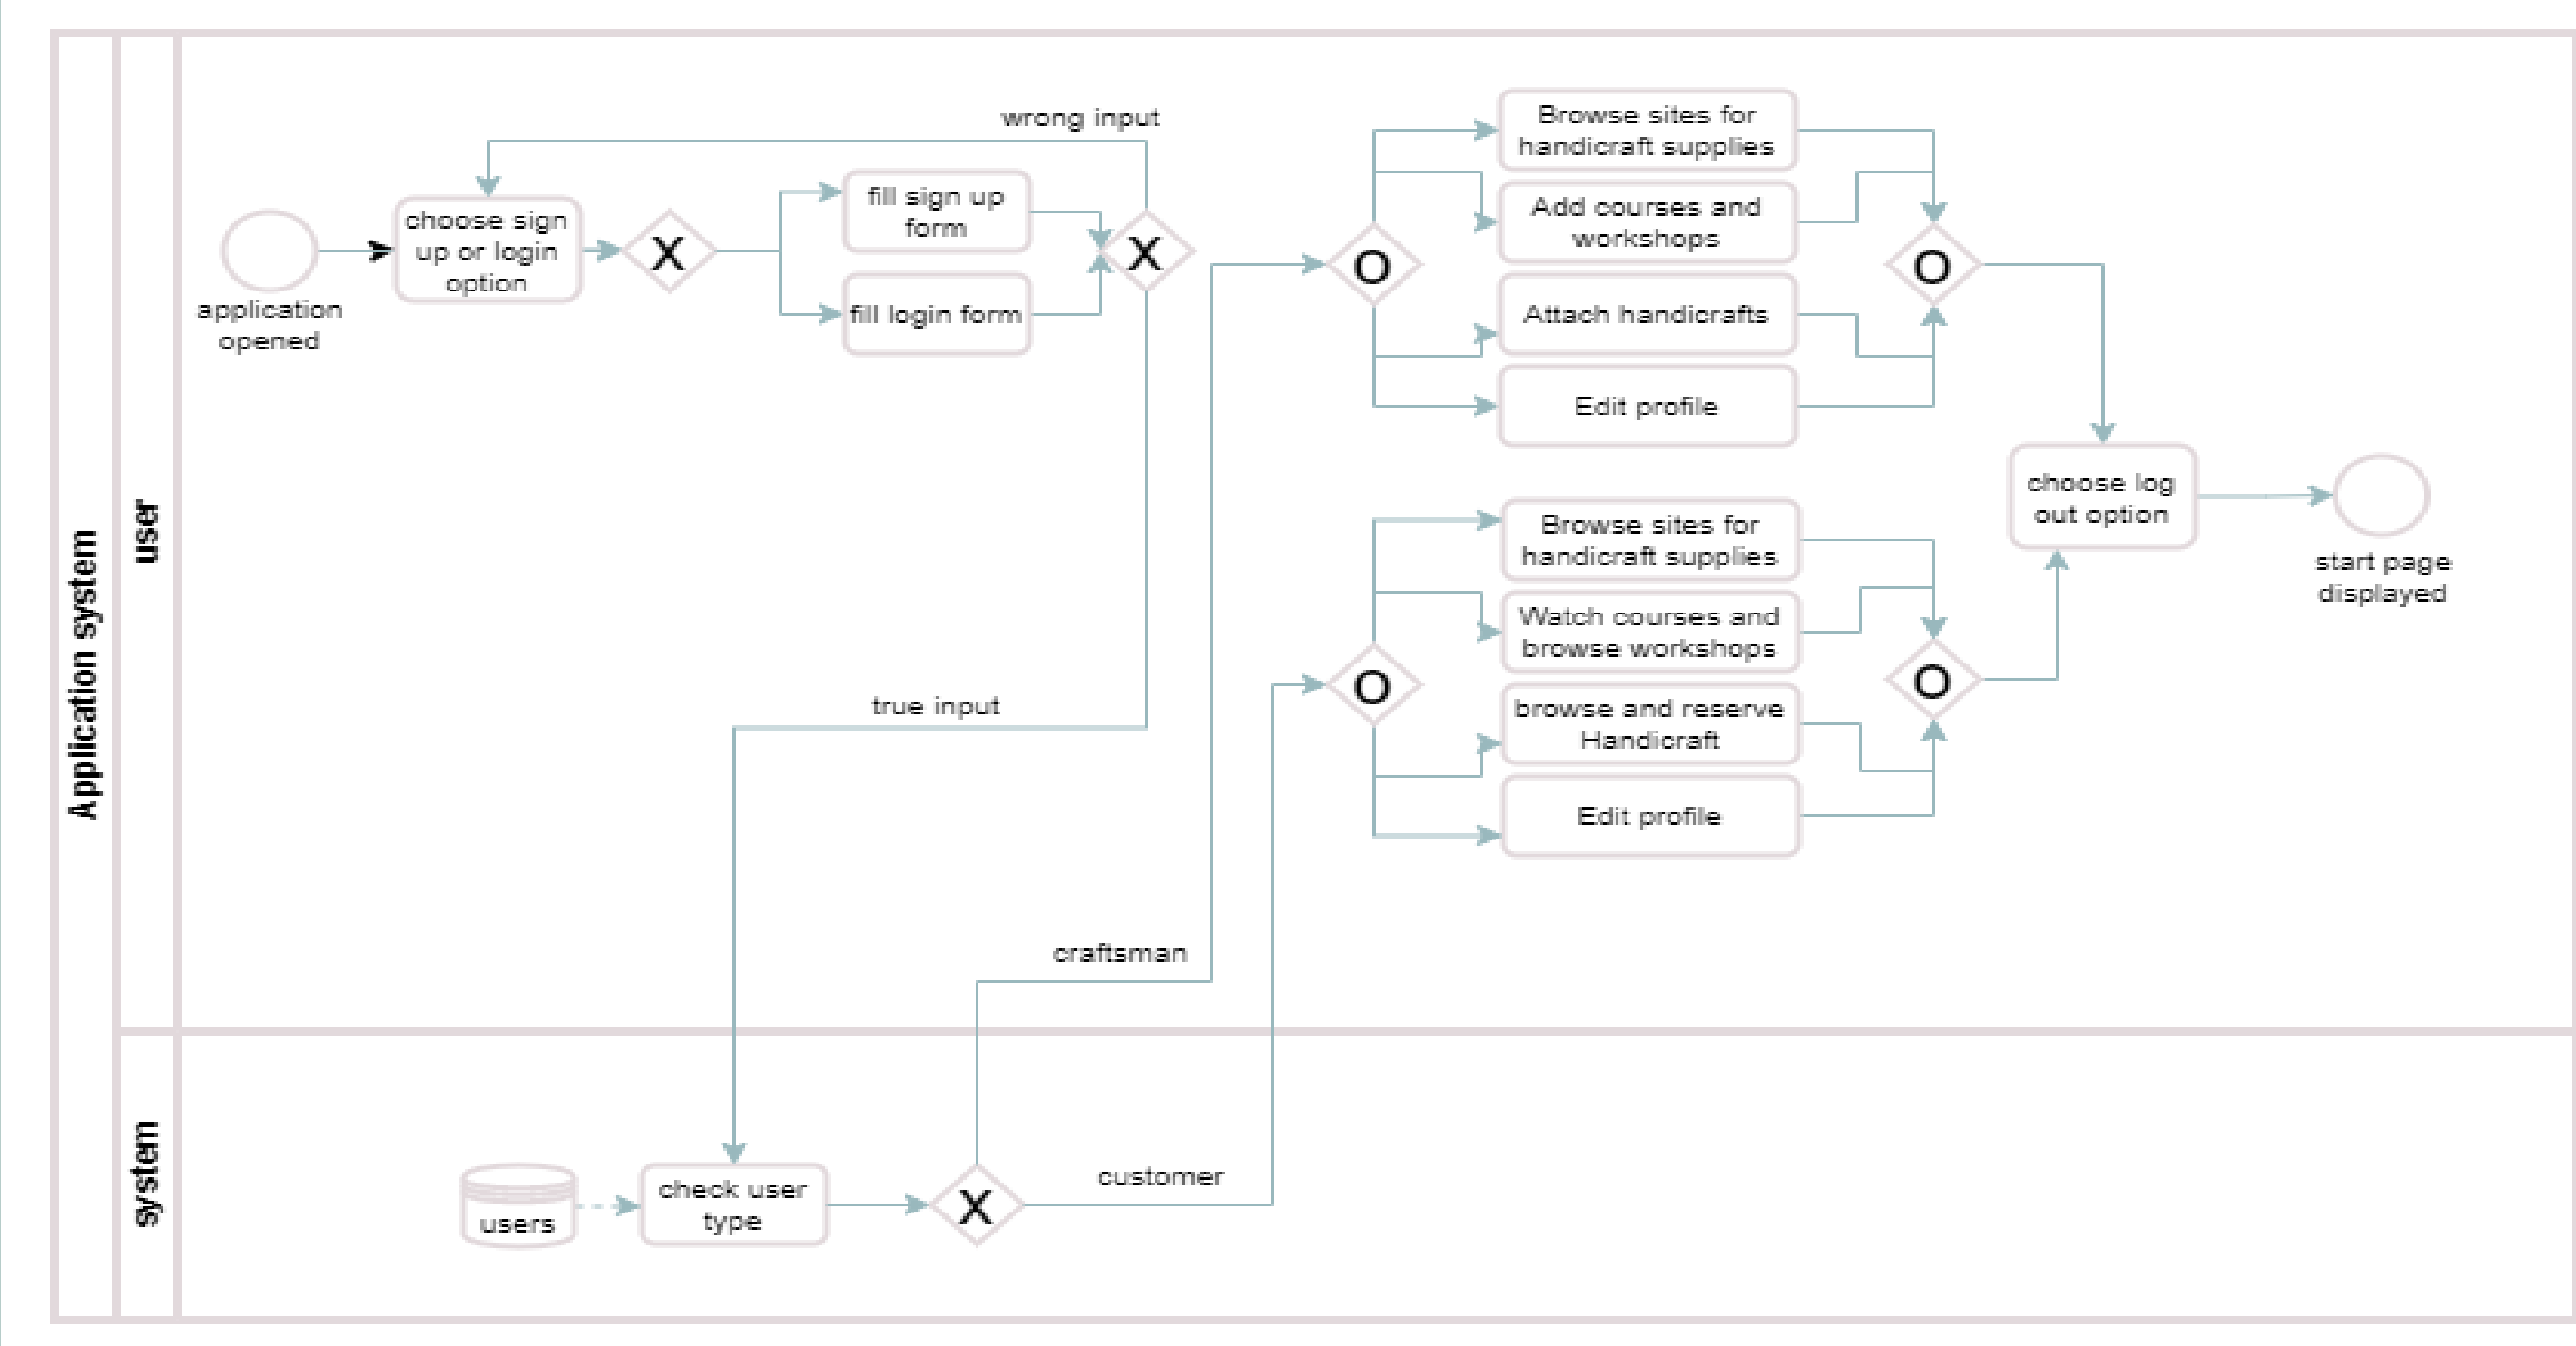

Create the application in Arabic to make it easier for the Saudi or Arab community to learn.

Methodology

General BPMN

Tools

Android studio

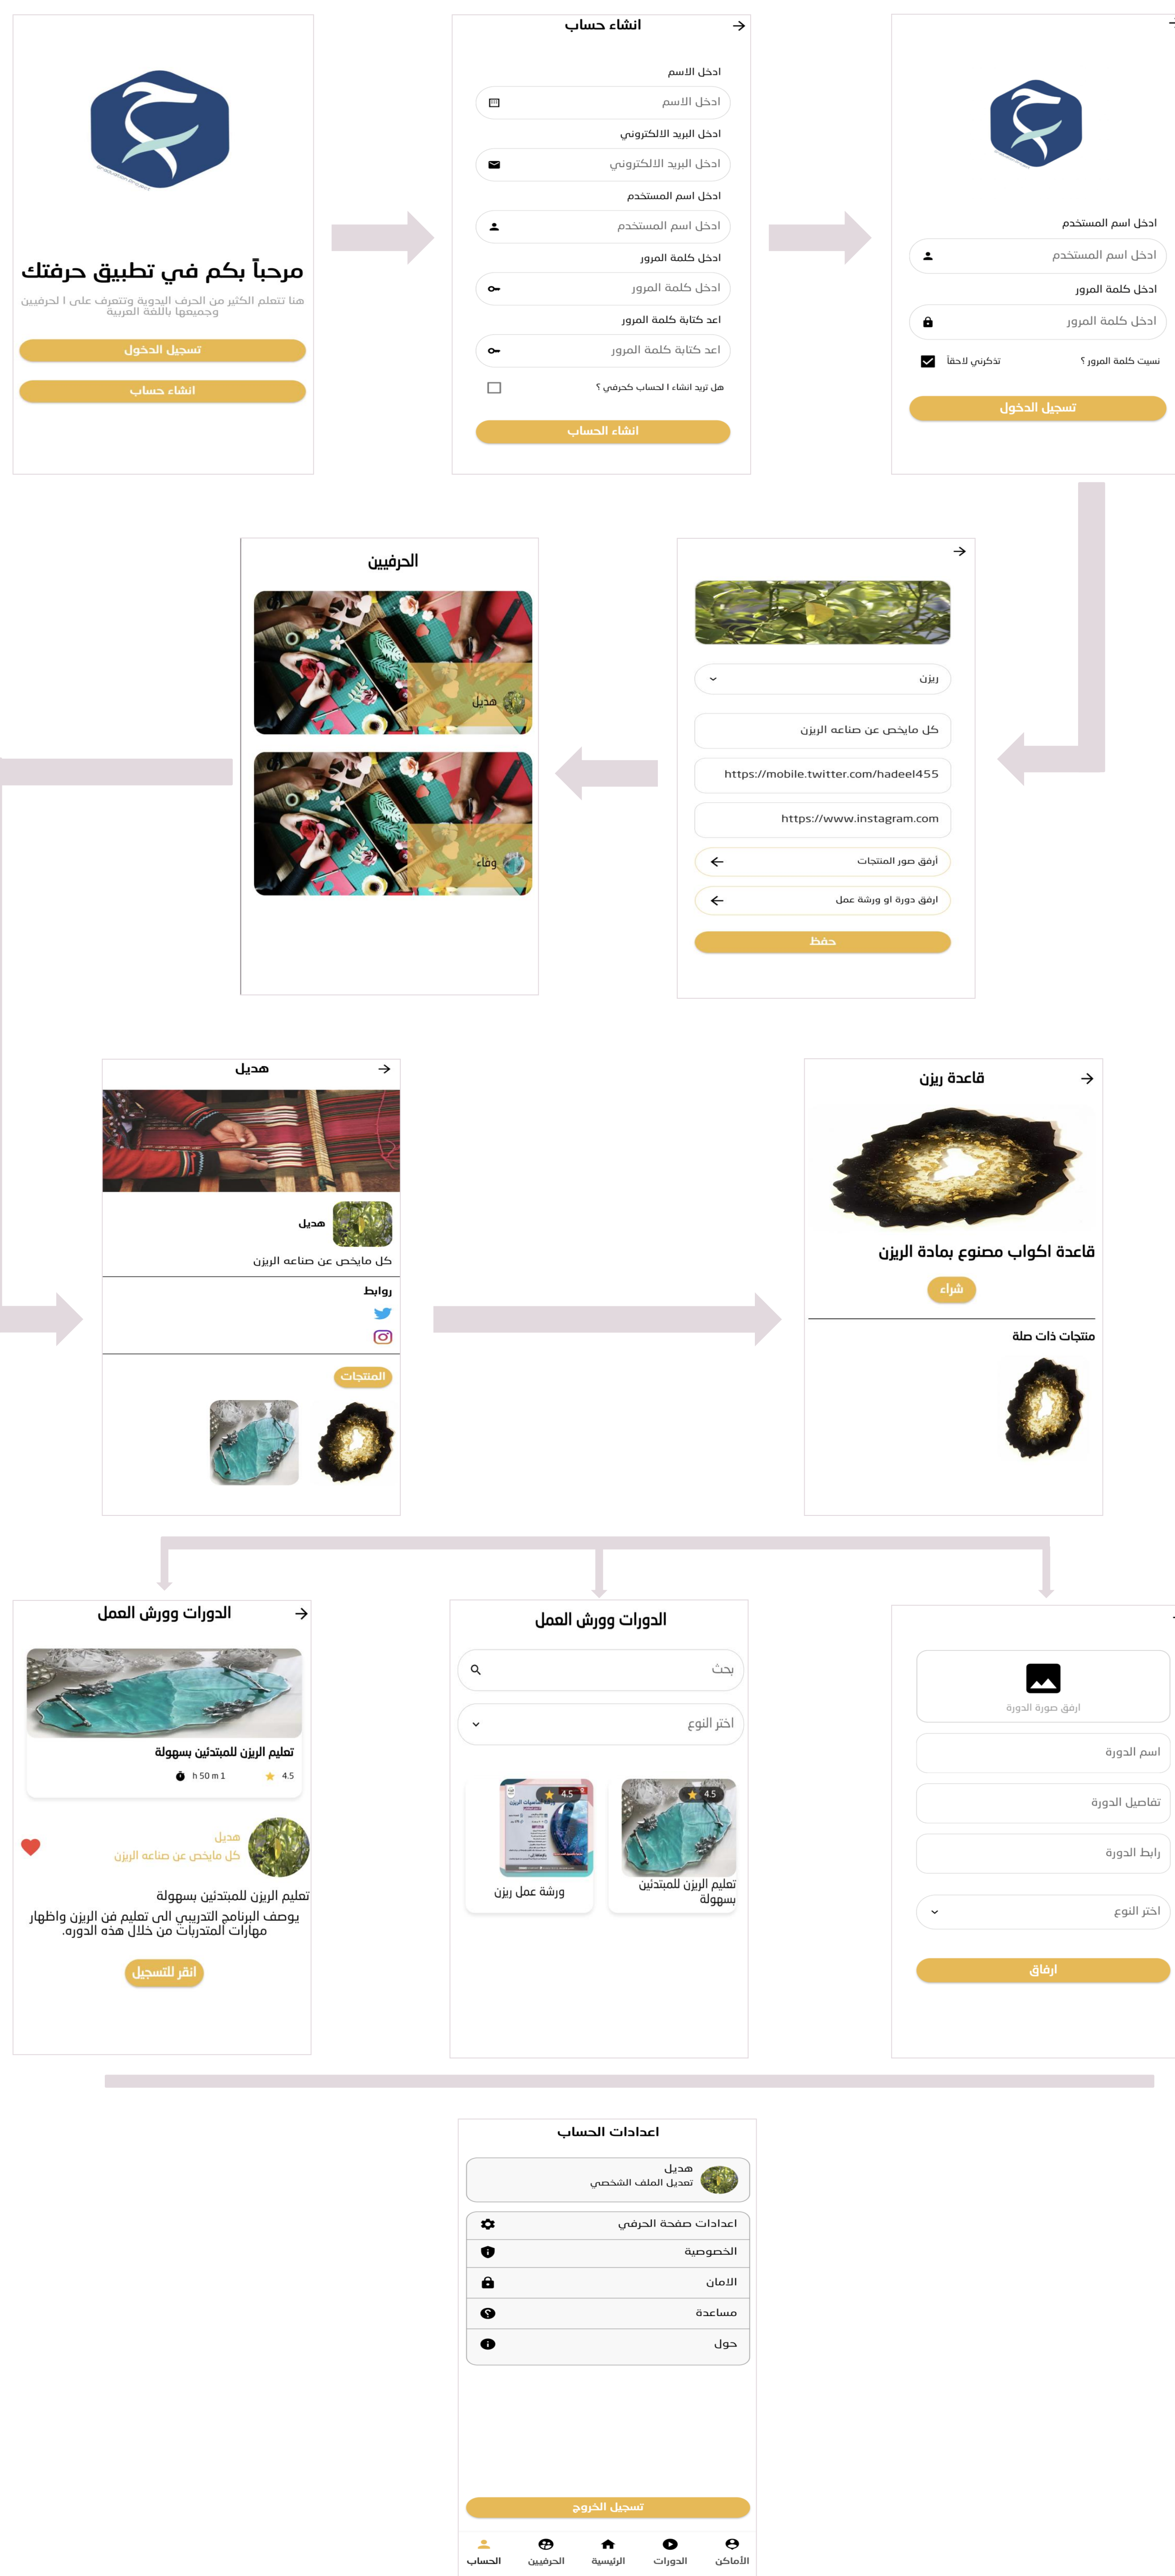

Firebase

Flutter

Prototype

Future Work

Add new languages to attract large audience.

Enable users to write their opinions about courses and workshops and evaluate them.

Conclusion

In our project, we relied on several aspects and objectives of the Kingdom's Vision 2030, which is the ambitious homeland. We support local content, manpower and art-loving and showcase the efforts of citizens. For our part, we technology students supported them with an application that contains their works made by Saudi hands, and we contribute to educating those who have the desire to possess one of the technical skills, by watching educational courses or attending training workshops.
