Introduction

Many systems in the world has been developed as mobile applications and people always tend to use them frequently which encouraged us to think of this application, our application (Let's Cycling) is for cycle rental in different regions and aims to help the community in solving the problem of renting cycles for those who are interested and making sure they are available all the time and help to promoting public health in the community, as the bicycle is an important sport, and it is also inexpensive, and using this application will reduce car congestion in the area, so that a large group will go to use bicycles instead of cars, the application targets the interested people within the community.

Project Aims

The proposed application aims to facilitate the process of searching for bicycles for those who are interested in keep on environment protection from pollution, reducing congestion on the roads, low-cost sport, increasing motivation and contributing to creating a healthier society, and means of entertainment.

Data Collecting

Data collected about customer needs and current applications through: -

- Making a survey-
- Studying the existing similar applications and their characteristics

Expected Results

The service will be completed, and the application will allow users to: request pneumatic grades of several types individually or collectively, participate in challenges and increase motivation, tenants can register in the app and trade their products

Developing tools

Conclusion

let's cycling application will contribute to provide a distinctive user experience in the field of sports, and will facilitate the process of obtaining a healthy mean of transport.
