Since students potentially face understanding problems during the learning process, they need teachers' assistance to improve their learning level. One major issue is how to make student-teacher communication easy and efficient. In this project, we designed and implemented a Handy Tutoring Tool (HTT) mobile application to tackle this problem. HTT provides several services to enhance student's knowledge and learning via efficient tutoring.

MAIN FEATURES

-Continuous connection between students and faculty members at the College
-Flexible & immediate answer with teacher
-box for common and repeated questions to shorten the time
