Introduction

Autism is perceived as a wide spectrum disorder that can be defined as a pervasive neural-developmental disorder that affects, how a person perceives the world and his interaction with others.

Aim And Objectives

The Epsar application was created to be useful for autistic children, as it allows their parents to obtain services that help a child with autism interact with his/her family and surrounding environment.

with four objectives:

1- Diagnosing and evaluating his condition remotely without the need to go to the center

2- Providing training activities

3- Providing an electronic store for the right toys for them

4- Helpful blogs to help the parent.

Conclusion And Future Work

Overall, these achievements (Epsar app) can help the families of autistic children and make their live easier

Future Work...

- Make the system multi-languages
- Add the payment system
- Add a complete conversation system , both parties can send and receive.
