

ABSTRACT

we present to you a pioneering health application that combines three services in one platform. This app not only provides accurate reminders of when to take medication, but also allows users to talk to qualified doctors anytime and anywhere via text chat, allowing them to get fast and reliable medical advice. To ensure the safety of users, the application also reminds you of the expiration of medication and provides early notifications to ensure that treatment is being continued correctly.

METHODOLOGY

APPLICATION INTERFACES

RESULTS

The results of our project can be summarized as follows:

- An application that allows the patient to enter the dose and timing and remind the patient about it.
- The patient communicates with the doctor.
- Search for a medication and know its side effects.
- Alert the patient that the medicine is about to expire.

FUTURE WORK

- Make the system bilingual (Arabic and English).
- New medications will be added to the pharmacy.
- Adding a medical consultation via video call.
- Expanding the spatial scale so that it expands and delivers outside Mecca.
- Improvement of the special design section and make it more flexible.
- Add a box to write suggestions or complaints.

CONCLUSIONS

This project's value is evident in its ability to assist patients of all ages in adhering to their medication schedules, thereby preventing missed doses or accidental overdoses. Ultimately, this promotes their overall health and well-being.
