COLLEGE OF COMPUTER AND INFORMATION SYSTEMS

ABSTRACT

Organizing parties that include a large number of people is an arduous task that not everyone is good at, and its difficulty may increase due to a lack of organization and prior thinking. We strive to avoid these things, from preparing for the event months in advance to staying balanced on the day of the event.

Objectives

1. Building credibility.
2. Building multiple relationships.
3. Saving time for universities.
4. Reducing fraud in the field of organizing events.

Development Tools

Dart

Flutter

MongoDB

python

Future Work

Adding more languages to make the system available for more people.

Adding new feature to allow users (students) add suggestion to create events.

Adding new feature to create an archive that displays previous events memorize.

Allow student rate the events.
Create an app related with the web-based system.

Result

An application for organizing and following up on seasonal events at universities in various cities.

Application Interfaces
